Dhaka, Bangladesh

Education

North South University, Dhaka

B.Sc. in CSE

CGPA: 3.62/4.0

2015–2018

Experience

Freelance MLOps Engineer, Carboniq (Remote)

May 2025–Present

- Designed the core MLOps architecture (ETL, training pipelines, MLflow, Airflow) for a developing carbon accounting platform. - Built a multi-tenant PostgreSQL API, containerized workflows, and CI/CD pipelines to support scalable future deployment.

Product Analyst, Power Ledger, Perth

Oct 2022–Feb 2024

- Performed analytics and QA on energy trading products, reducing logic-related issues and improving reporting efficiency through automated templates. - Collaborated with engineering and product teams to streamline trading logic handoffs, accelerating feature delivery and cutting manual analysis time.

Sr. Technical Analyst, InsideMaps, Dhaka

Aug 2021–Jun 2023

- Automated operational reports and optimized data pipelines, saving hours weekly and improving workflow turnaround across teams. - Built scalable automation scripts with engineering, reducing recurring operational errors and enhancing overall process reliability.

Jr. Data Scientist, Me-Solshare, Dhaka

Nov 2019–Aug 2021

- Developed high-accuracy (95%) forecasting models with optimized preprocessing pipelines and deployed insights to dashboards, improving load planning and operational decision speed.

Projects

CarbonIQ MLOps • Web Development

- Designed a scalable carbon accounting platform using **FastAPI, PyTorch, Airflow, PostgreSQL, Docker, Kafka**.
- Developed time-series forecasting and automated ETL/ELT pipelines with Airflow/dbt and a multi-tenant API architecture.
- Improved pipeline reliability and performance through containerization, structured logging, and evaluation optimizations.

EcoPulse MLOps • PyTorch

- Built an end-to-end **MLOps pipeline** using PyTorch, Airflow, dbt, MLflow, and FastAPI for reproducible training and deployment.
- Automated training, evaluation, versioning, and CI/CD with GitHub Actions and MLflow Model Registry integration.
- Implemented containerized workflows with Docker and enhanced observability via structured logging and artifact tracking.

Skills

Core Data Science:

Python, Java, PyTorch, TensorFlow, Scikit-learn, FastAPI

MLOps & Deployment:

Docker, Airflow, MLflow, CI/CD, Kubernetes

Databases & Analytics:

PostgreSQL, BigQuery, Tableau, Looker Studio, Google Sheets

Tools & Cloud:

AWS, Linux, Shell, Git, LaTeX, Jira

Publications & Certifications

- OCR Using Synthetic Dataset Generation, IJCCI 2020
- Population Estimation of Rohingya Refugees Using ANN, VJCS 2019

- Deep Learning Specialization, Coursera 2022
- Machine Learning Specialization, Coursera 2021
